Anti-Theft Discount

Vehicle Description

Year	Make	Model Name
Full Identification Number		

Instructions: "X" the box next to each device the vehicle is equipped with. See definitions on the back of this form.

Category I - Any of the following:

- an anti-hot-wiring circuit;
- an alarm device that is activated by a door sensor, hood sensor, and trunk sensor;
- a window identification system; or
- an armored steel collar that covers the steering column, especially to prevent access to the ignition system.

Category II - Category I plus anti-hot-wiring circuit, automatic shutoff and reset and two or more of the following:

- glass sensor;
- vibration sensor;
- motion sensor; or
- ultrasonic sensor.

Category III - Category II plus a hood restraint and backup battery.

Category IV - Category III plus a system using a passive method of activating or deactivating the alarm system.

Category V - Category IV plus a stolen vehicle recovery system.

"X" the box next to the qualifying category that generates the highest applicable discount. If the vehicle is equipped with more than one qualifying device only the single highest discount shall apply:

- Category I** **Category II** **Category III** **Category IV** **Category V**

Certification Agreement

I certify that my vehicle is equipped with the devices indicated on this form. I also certify that the devices are in good working order and will continue to be so maintained.

Definitions - Anti-Theft Devices:

- a. "Alarm device" means a motor vehicle's horn, bell, siren or other sounding device that is easily audible at 300 feet.
- b. "Anti-hot-wiring circuit" means a circuit or method that prevents a motor vehicle from starting, including ignition interrupts, starter interrupts, or fuel interrupts.
- c. "Anti-theft device" means a device that helps prevent vandalism to or theft of a motor vehicle or its contents.
- d. "Automatic shutoff and reset" means a system by which an alarm device sounds for not more than four minutes, shuts off, and immediately rearms itself.
- e. "Backup battery" means an auxiliary power source that trips an alarm device if the main power source is disconnected or if wires to the alarm device are cut or disconnected.
- f. "Door sensor" means a mechanical switch that activates the alarm device.
- g. "Glass sensor" means an electronic device that activates the alarm device if it detects the sound of breaking glass or metal in contact with glass.
- h. "Hood restraint" means a device preventing full access to the under-hood components, including chain restraints that only allow the hood to open a maximum of four inches, a mechanical or electrical device that physically locks the hood down, or a mechanical or electrical device that prevents the factory supplied hood mechanism from operating.
- i. "Hood sensor" means a mechanical switch that activates the alarm device.
- j. "Motion sensor" means a mechanical device that activates the alarm device if the vehicle is jacked up or towed.
- k. "Stolen vehicle recovery system" means an independently operated system that automatically notifies a monitoring center if a motor vehicle equipped with the system is started by any means other than through use of an ignition key.
- l. "Trunk sensor" means a mechanical switch that activates the alarm device if the trunk is opened while the alarm system is armed.
- m. "Ultrasonic sensor" means an electronic device that activates the alarm device if an ultrasonic field is disturbed inside the motor vehicle.
- n. "Vibration sensor" means a mechanical or electrical device that activates the alarm device if any part of the motor vehicle is bumped, causing vibration.
- o. "Window identification system" means a system under which the motor vehicle identification number is permanently marked on at least two windows of the motor vehicle other than the small vent windows.
